- * Ensure it is tightened as much as possible onto the fittings. This prevents it coming loose resulting in possible damage not only to the frame but also to other objects nearby (like someone's head!)
- * Take care to select the correct fitting that will hold the weight of the frame.
- * 4 widths available, which are used depending on weight of frame to be hung

- * We offer 3 types:- a) All Brass ; b) Stainless Steel ; c Plastic Covered Stainless Steel
- * There is a rule of thumb when deciding which wire to use. It is recommended that the breaking strength (tensile) of the wire should always be double that of the weight of the image to be hung
